

SECUREDROP™ - The SAFEST Way to Store Your Files Online

National Record Retrieval is more than just a record retrieval business, we are an online document management and storage company as well. We have developed the most secure technology in the business, so why not use it to your advantage? Built with security in mind, all data is encrypted using 256-bit Rijndael (AES) encryption recognized as the standard for protecting sensitive data for government and military grade applications.

SecureDrop™ is a document management and storage solution. We allow our clients to use our virtual file indexing system to store all of their important documents. We created a solution that gives you the ability to share, collect, and store all confidential documents with your client. Your client has the ability to upload important information directly into your SecureDrop™ database and, likewise, you can send information back to them.

All of our clients that request a minimal number of medical records, or any other documents per month, will receive SecureDrop™ at no additional cost. If you do not use NRR for medical records, you may choose a low monthly subscription fee for our SecureDrop™ application only.

When it comes to record retrieval, we would like to be the one you choose. When it comes to the best and most secure document management and storage solution, **we are the only one to choose.**

"When I saw how National Record Retrieval used technology to speed up turnaround time I was sold. Then, they demonstrated how their site is 4x more secure than online banking....WOW! I also like the fact that they charge a set price, no hidden scanning or per page fees that many other services charge."
